

Battle Backgrounds

Data Format

Byte \$00-\$02		Three pointers to BG Graphics				The first three bytes are pointers to GFX sets. If pointer 1 or 2 is \$FF, it will use second half of set 0 (tiles \$80-\$FF). This is why GFX pointer 1 is often the same as GFX pointer 0. Byte \$03 is a tile assembly pointer and byte 4 is always the same, hence it is not repeated in the table. Byte \$05 is the palette ID and if bit 7 is set it mean the background has the wavy or heat effect.				
---	\$00-\$FE	Pointer (3 * value + \$E71650)								
---	\$FF	Use second half of uncompressed BG Graphics 0								
Byte \$03		Tile Assembly pointer (2 * value + \$E71848)								
Byte \$04		Tile Assembly pointer (always a copy of \$03)								
Byte \$05		Palette Index (3 * 16 colors)								
---	\$00-\$7F	Pointer (96 * value + \$E70150)								
---	\$80-\$FF	Pointer (96 * value + \$E70150) + wavy BG
